And from Emma:

Emma Årlebäck has a master's degree in Engineering Physics at Faculty of Engineering at Lund University, where she specialized in machine intelligence. Today, she works as an AI Engineer at Axis Communications AB.

In her presentation she will give some insights into how her team works with responsible AI in their day-to-day work at a Swedish firm and the considerations going into these processes. She will also touch upon the environmental impact of embedded machine learning

Kind regards

Sigrid Jessen

And from Pauline:

Pauline Mattsson is an Associate Professor at the School of Economics and Management, Lund University, specializing in Science and Technology Policy and R&D Management. Her research and teaching focus on the intersection of innovation, policy, and societal transformation. She explores how research environments shape the capacity for groundbreaking, high-risk discovery, and how such innovations translate into real-world impact.

The lecture adopts a critical perspective on AI, moving beyond both hype and fear to examine its ethical, geopolitical, and democratic consequences. It explores how AI reshapes power structures, governance, and global competition, while emphasizing responsible innovation, ensuring that technological progress remains socially accountable and aligned with democratic principles.

Subject: Bio from Cecilia

Hi both, Here comes the bio and picture from Cecilia for the program 😊

Cecilia Leveaux is a Senior Advisor at the Nordic Council of Ministers, where she has worked with Nordic and Nordic-Baltic cooperation on digitalisation, AI and emerging technologies for the past five years. A Swedish diplomat on leave from the Swedish Ministry for Foreign Affairs, Cecilia brings a policy and international cooperation perspective to questions of digital transformation, competitiveness and responsible AI. She currently serves as the Nordic Council of Ministers' representative on the Board of New Nordics AI.

Kind regards
